Front and Center: Anterior Composite Conversations for the Whole Team

Patients notice everything about their front teeth, from a dark margin to a gap that has always bothered them. This high-impact course explores conservative anterior composite options—including black triangle and diastema closures, injection-molded composite, and caries and trauma repairs—along with shade selection, polishing, and home care for natural-looking results.

The course also addresses diagnostic agreement and core values, helping providers and team members understand what drives their practice and how they would want to be treated as patients. Participants will strengthen a unified, compassionate approach to identifying unspoken esthetic concerns and discussing science-backed treatment options with confidence.

AT THE END OF THE COURSE, YOU WILL:

- Understand modern anterior composite options and explain them in patient-friendly terms.
- Describe how shade selection, polishing, and home care support natural-looking, durable restorations.
- Explore personal and practice core values to improve communication across hygiene, restorative, and front-office teams.
- Recognize unspoken esthetic concerns and confidently initiate informed, compassionate conversations.

Using Tech to Seamlessly Make Your Office Extraordinary

Fifty years ago, patients were generally satisfied if their dentist was pleasant, clinically competent, and thorough. Today, however, companies like Amazon and Google have transformed consumer expectations, creating a demand for convenience, efficiency, accessibility, and personalized service.

Dental patients now expect the same seamless experiences from their dental offices that they enjoy in other areas of their daily lives. Fortunately, advancements in technology and dental software have created exciting opportunities for practices to meet these expectations while improving communication, streamlining operations, and enhancing the overall patient experience.

In this engaging presentation, Dr. Gupta explores how technology can help your dental practice operate at its full potential.

LEARNING OBJECTIVES

- Understand the expectations of today's dental patients.
- Recognize how dental software has evolved and where it can help.
- View common communication limitations from the patient's perspective.
- Identify practical steps to move an office from ordinary to extraordinary.
